the prototypical multilinear operation is multiplication indeed every multilinear mapping can be factored through a tensor product apart from its intrinsic interest the tensor product is of fundamental importance in a variety of disciplines ranging from matrix inequalities and group representation theory to the combinatorics of symmetric functions and all these subjects appear in this book another attraction of multilinear algebra lies in its power to unify such seemingly diverse topics this is done in the final chapter by means of the rational representations of the full linear group arising as characters of these representations the classical schur polynomials are one of the keys to unification prerequisites for the book are minimized by self contained introductions in the early chapters throughout the text some of the easier proofs are left to the exercises and some of the more difficult ones to the references

this collection of 35 papers resulting from the 1984 ams ims siam summer research conference displays the cross developments between linear algebra including numerical linear algebra and systems and control theory linear algebraists will see how some beautiful and strong results of control and systems theory can be derived using the concepts of linear algebra control and systems theorists will find numerically viable algorithms which can be developed for some important control problems a full appreciation of the material requires an advanced course in linear algebra a basic course in matrix computation and a first course in control theory
